Cold Asphalt

repair[®] uses

- Instant and permanent repair to potholes of any size/shape/depth.
- Infilling cable ducts, trenches and as a joint filler.
- Repairs to concrete, slab corners, cut outs, spalls.
- Reinstatement around manhole covers, landing lights, cats eyes, etc. (bonds well to metal/composite materials).
- Bridge deck and core hole repairs, ramping, construction of speed humps, rumble strips and complete surface overlays.
- Specified for motorways, aircraft runways, docks, highways, rail platforms, car parks, public utilities, etc.
- Used by all types of industry, builders and home owners.

Making basic repairs with repair[®]

1. Brush out loose debris/water/oil from ANY shape hole.

2. Simply tip **repair[®]** from the pack (to a maximum of 30mm) and compact. Deeper holes require layering ± 30 mm and compacting at each stage.

3. For small areas compact to road level using hand tamper. Areas larger than half m² use a mechanical vibrating roller/plate compactor. If underfilled tip on more **repair[®]** and compact to level. Keep compactor wet with water to avoid sticking to material.

4. On completion of repair open immediately to traffic.

NB. Keep compaction plate wet with water. Do not use diesel on material or equipment.

Contents: 25kg cold asphalt.
Ready for use directly from the pack.
